

74.

~~267.~~

A method of forming a business card sheet construction, comprising:

- providing a facestock sheet having a front side surface and a back side surface;
- releasably adhering a liner sheet to the facestock sheet so that it covers at least substantially the entire back side surface;
- forming facestock continuous through-cut lines through the facestock sheet to the back side surface, but not through the liner sheet;
- the through-cut lines defining at least in part perimeter edges of printable business cards which directly abut one another and share at least a common edge;
- the back side surface of the facestock sheet forming back side surfaces of the printable business cards; and
- areas of the liner sheet covering back sides of the through-cut lines and thereby holding the printable business cards together when the business card sheet construction is fed into a printer or copier for a printing operation on the front side surface of the business cards and allowing the business cards to be removed from the liner sheet after the printing operation into individual printed business cards.
